

COMPANY OVERVIEW

Steel City Tech Software LLC is a Pittsburgh-based software and IT consulting firm founded in 2026. We deliver custom software, secure cloud platforms, workflow automation, and technical strategy for agencies and businesses that need systems built right. Clients work directly with senior engineering talent — no layers, no offshore handoffs.

CORE COMPETENCIES

- **Custom Software Engineering** — Applications, portals, dashboards, APIs, and internal tools built for reliability and maintainability.
- **Secure Cloud & Modernization** — AWS, Azure, GCP; legacy migration focused on performance, security, and operability.
- **Data & Workflow Automation** — Integrations, event-driven systems, search/analytics, and process tooling.
- **Custom Websites & Web Apps** — Fast, accessible, SEO-ready sites with real workflow integrations.
- **IT Consulting & Strategy** — Practical roadmaps, architecture, and delivery plans aligned to mission goals.

DIFFERENTIATORS

- Senior-level delivery led by an engineer with direct experience on federal mission systems (FBI CJIS / NCIC-related work).
- Pittsburgh-based with local presence and long-term partnership focus — direct access, no middle layers.
- Practical over flashy: clear technical plans, early validation, and maintainable systems.
- Full-stack capability across modern web, cloud, containers (Docker / Kubernetes / OpenShift), and data platforms.

PAST PERFORMANCE / KEY PERSONNEL EXPERIENCE

As a newly established company, Steel City Tech currently has no corporate past performance. Relevant federal experience is held by the Principal:

Federal Experience — Senior Software Engineer supporting FBI CJIS / NCIC modernization

November 2021 – Present

Supported FBI Criminal Justice Information Services (CJIS) / National Crime Information Center (NCIC) modernization efforts on a multi-year program focused on cloud transition and application modernization under Agile / SAgE delivery practices.

- Developed and maintained secure, scalable backend services and microservices using **Java / Spring Boot** in support of mission-critical law-enforcement information systems.
- Worked with **Elasticsearch / OpenSearch** for search, indexing, and analytics capabilities on large-scale record systems.
- Deployed and operated containerized workloads on **OpenShift / Kubernetes** platforms and cloud environments (AWS).
- Participated in Agile delivery practices aligned with federal program cadence; mentored engineers and supported technical hiring.

This experience provides direct familiarity with the security, reliability, auditability, and delivery expectations common to federal IT programs supporting public safety and criminal justice missions.
